

# Wonpay Service Manual

Ver 1

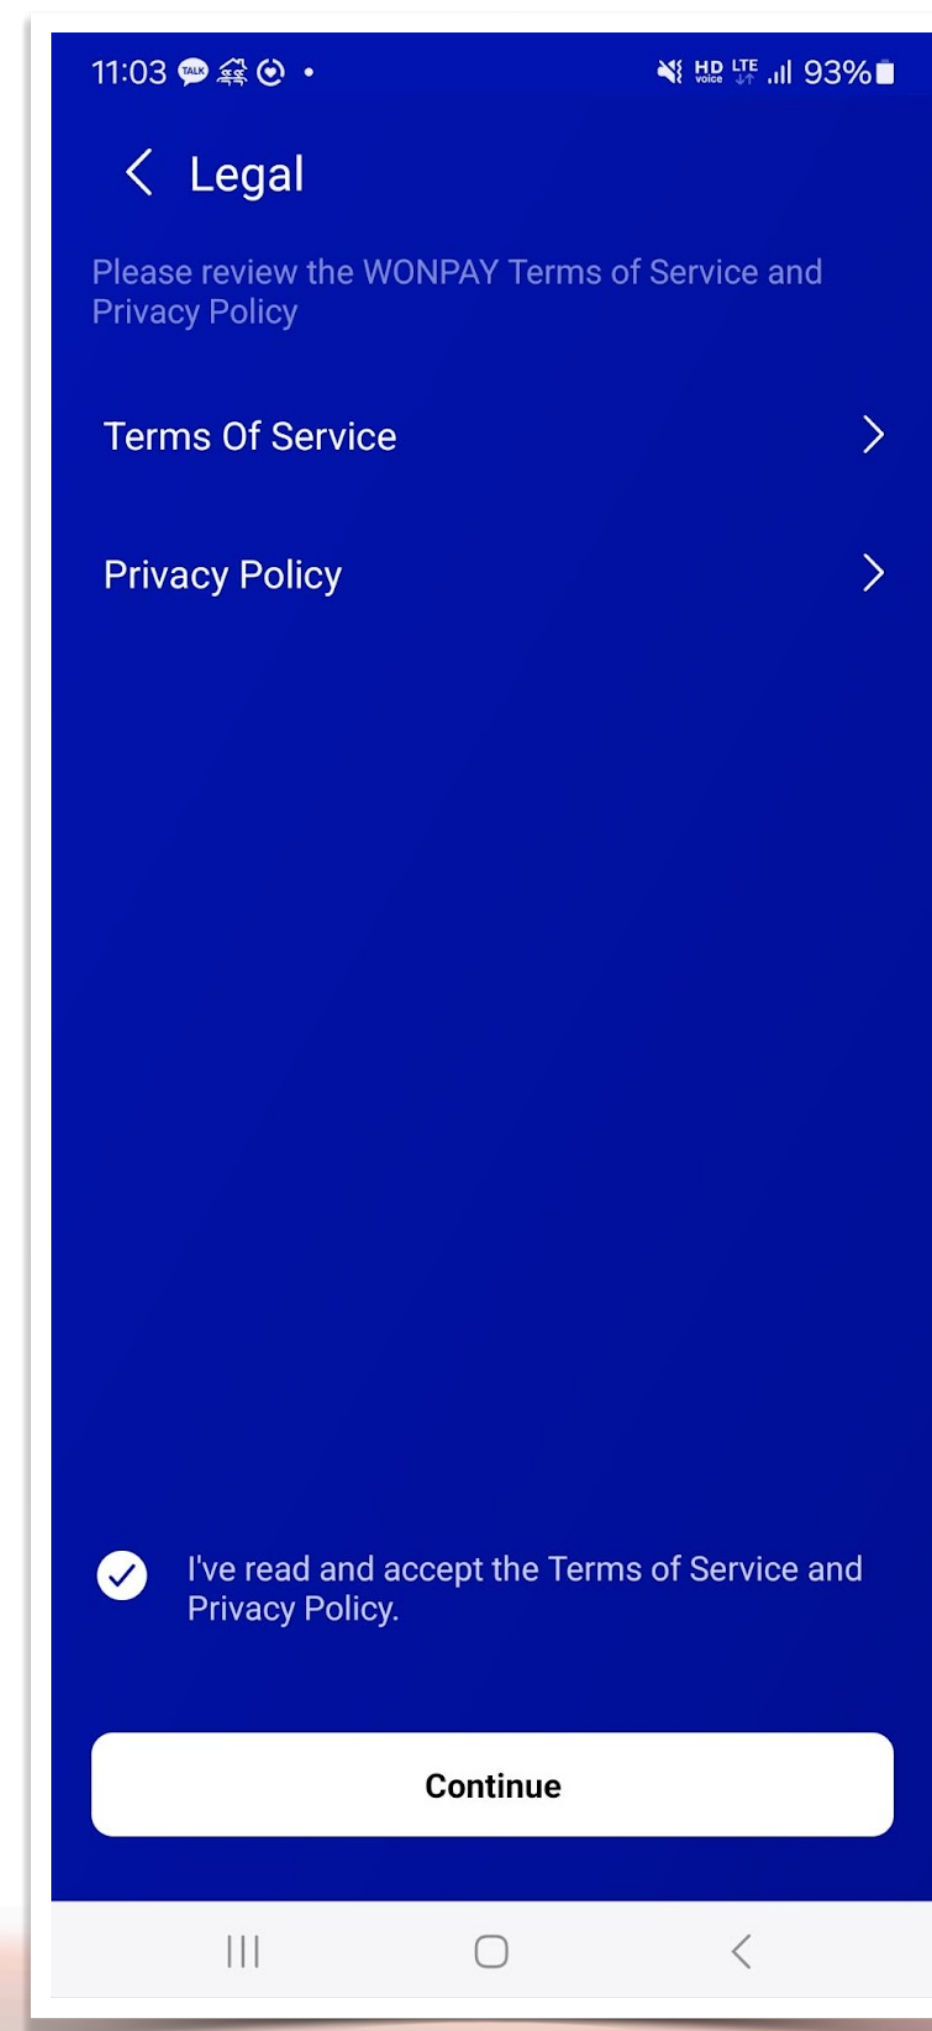

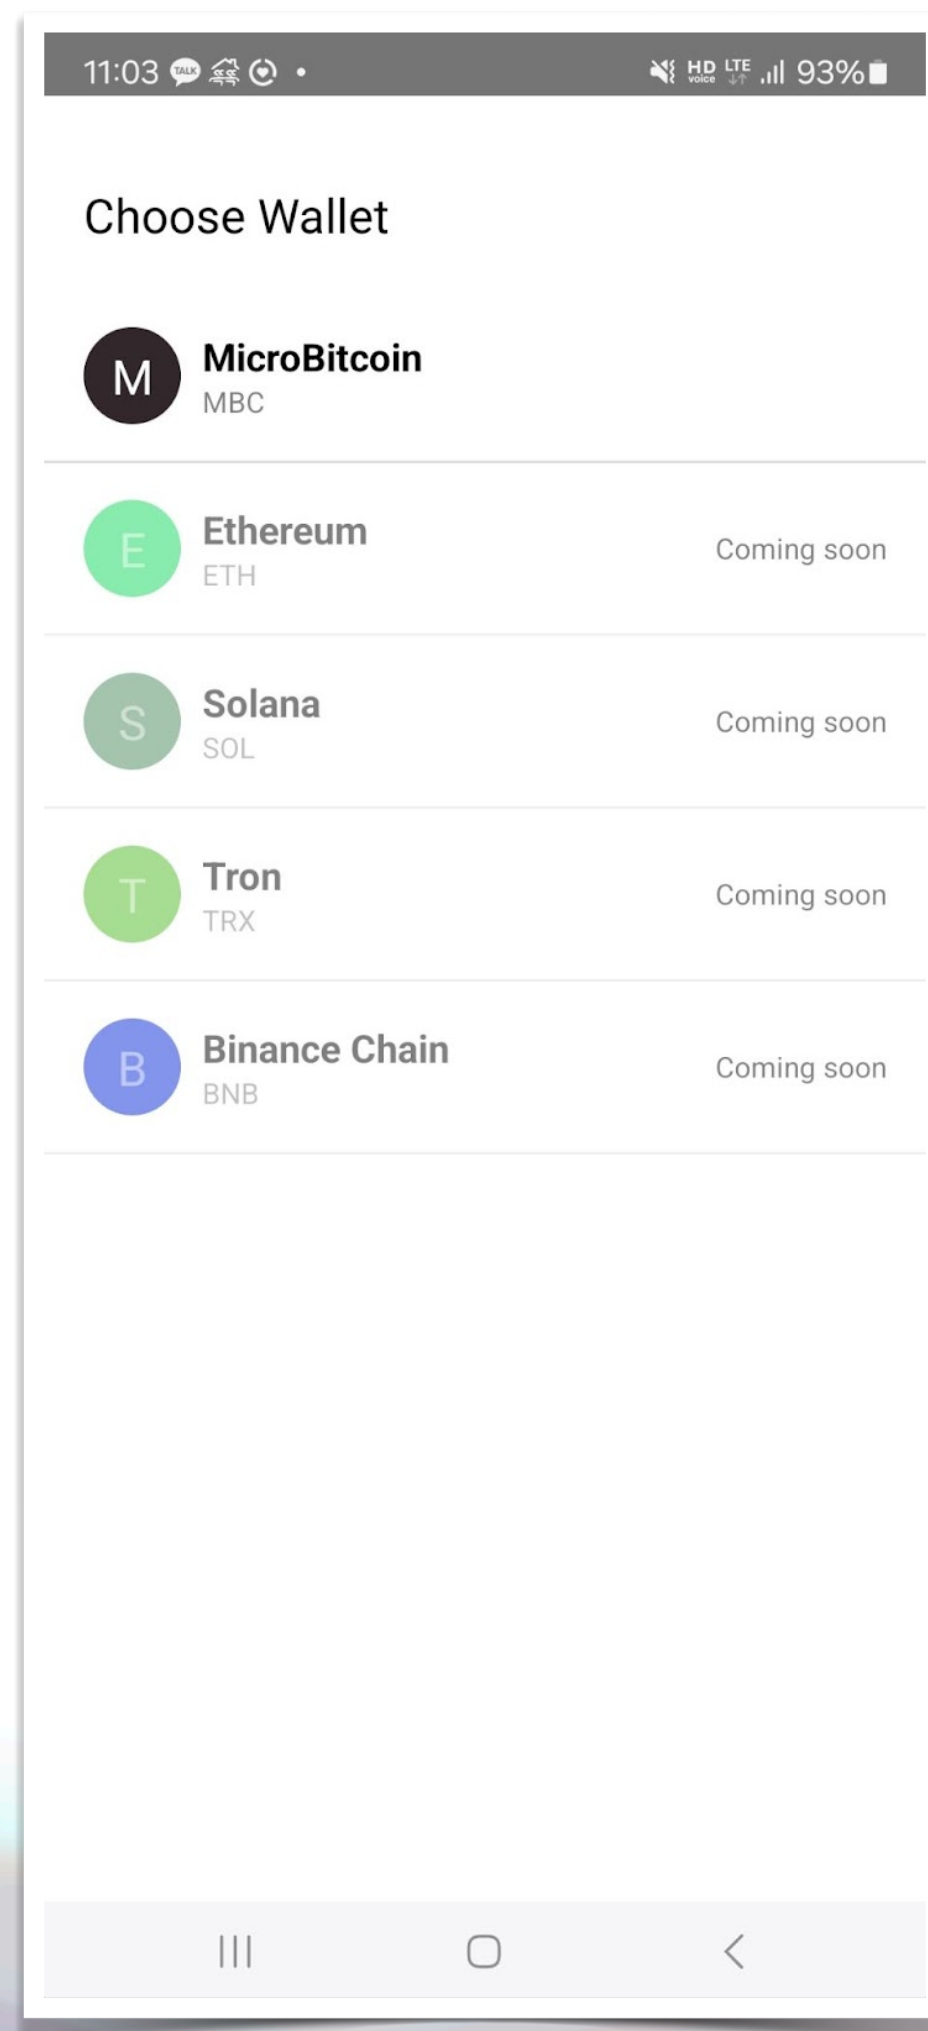

# Create a wallet

To create an account, you'll need to enter a six-digit security code. The code you enter should be a number that you can remember and is not easily guessed by others.

After you enter your password, you'll be asked if you've enrolled in biometric authentication (Face ID, Touch ID). If you have registered biometric authentication, you can use your device's biometric information for in-app authentication instead of a password.

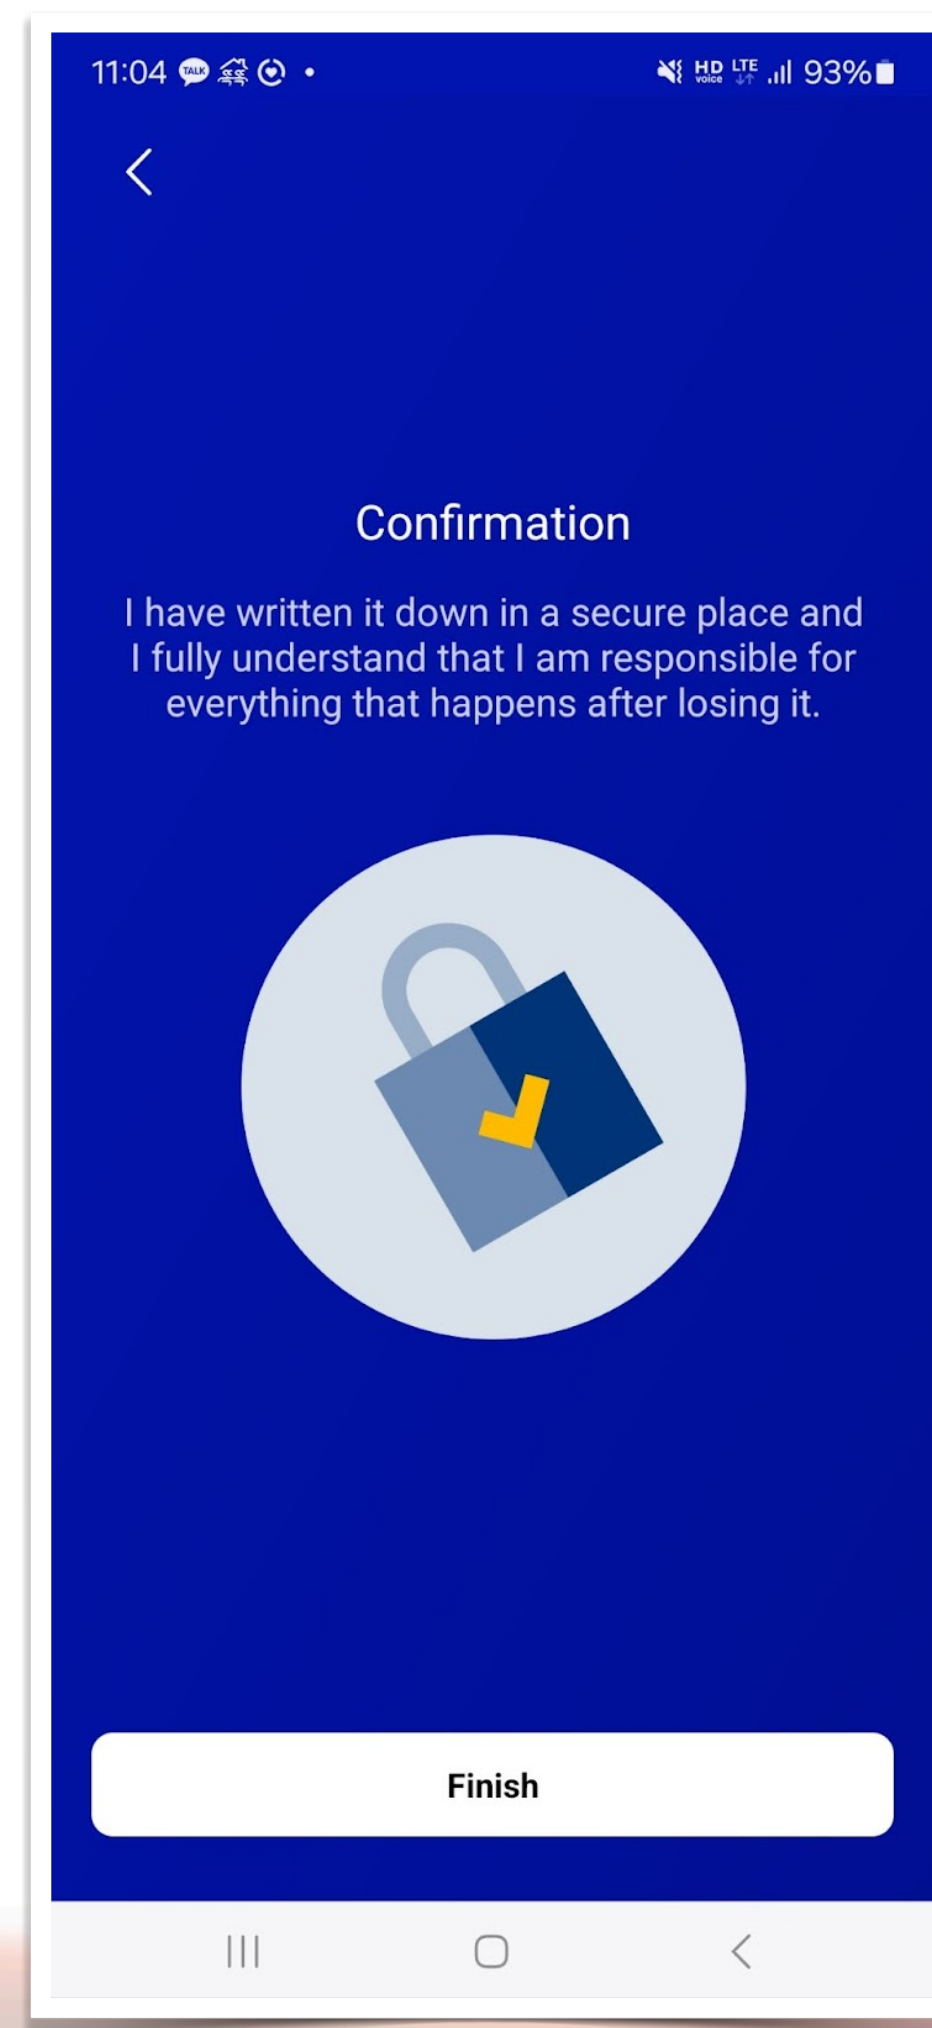

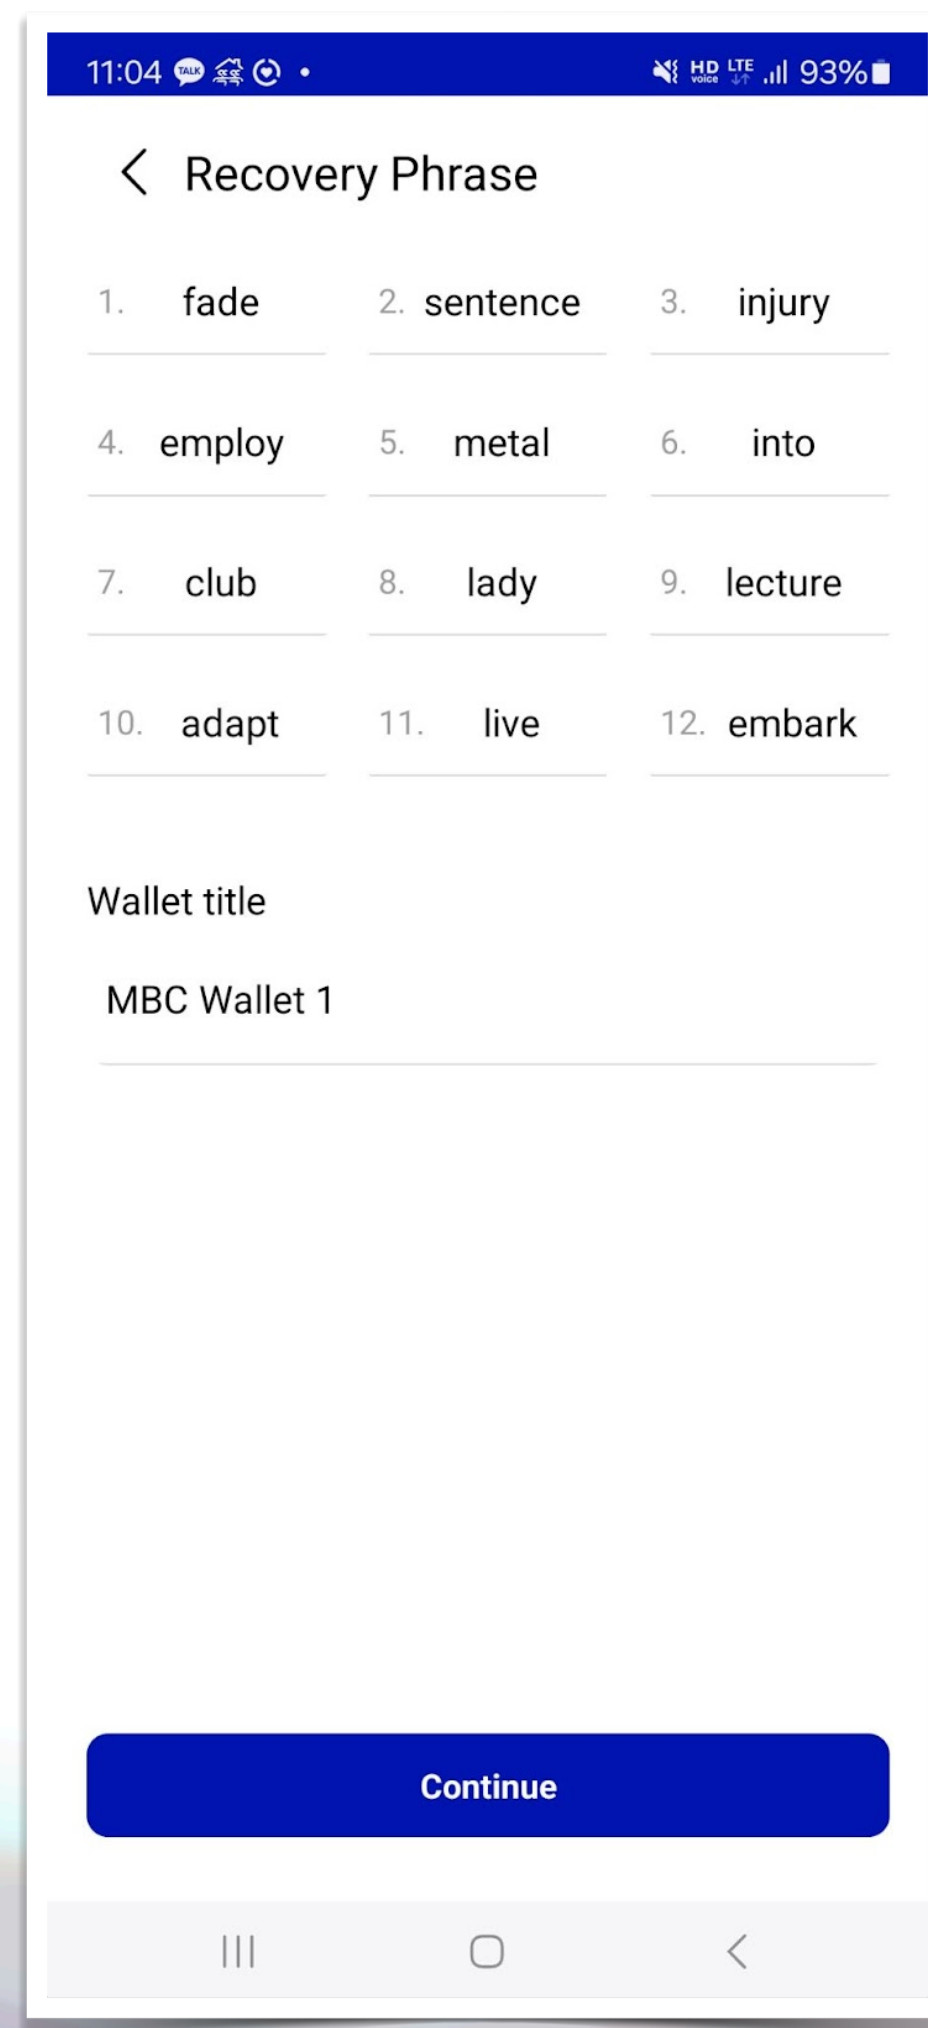

# Create a wallet

To create a wallet, you need to select the network you want to create the wallet on. (Currently, only the MicroBitcoin network is active; a future update will allow you to create wallets for other networks).

Read the Terms of Use and Privacy Policy. If you do not agree to them, you will not be able to create a wallet.

# Create a wallet

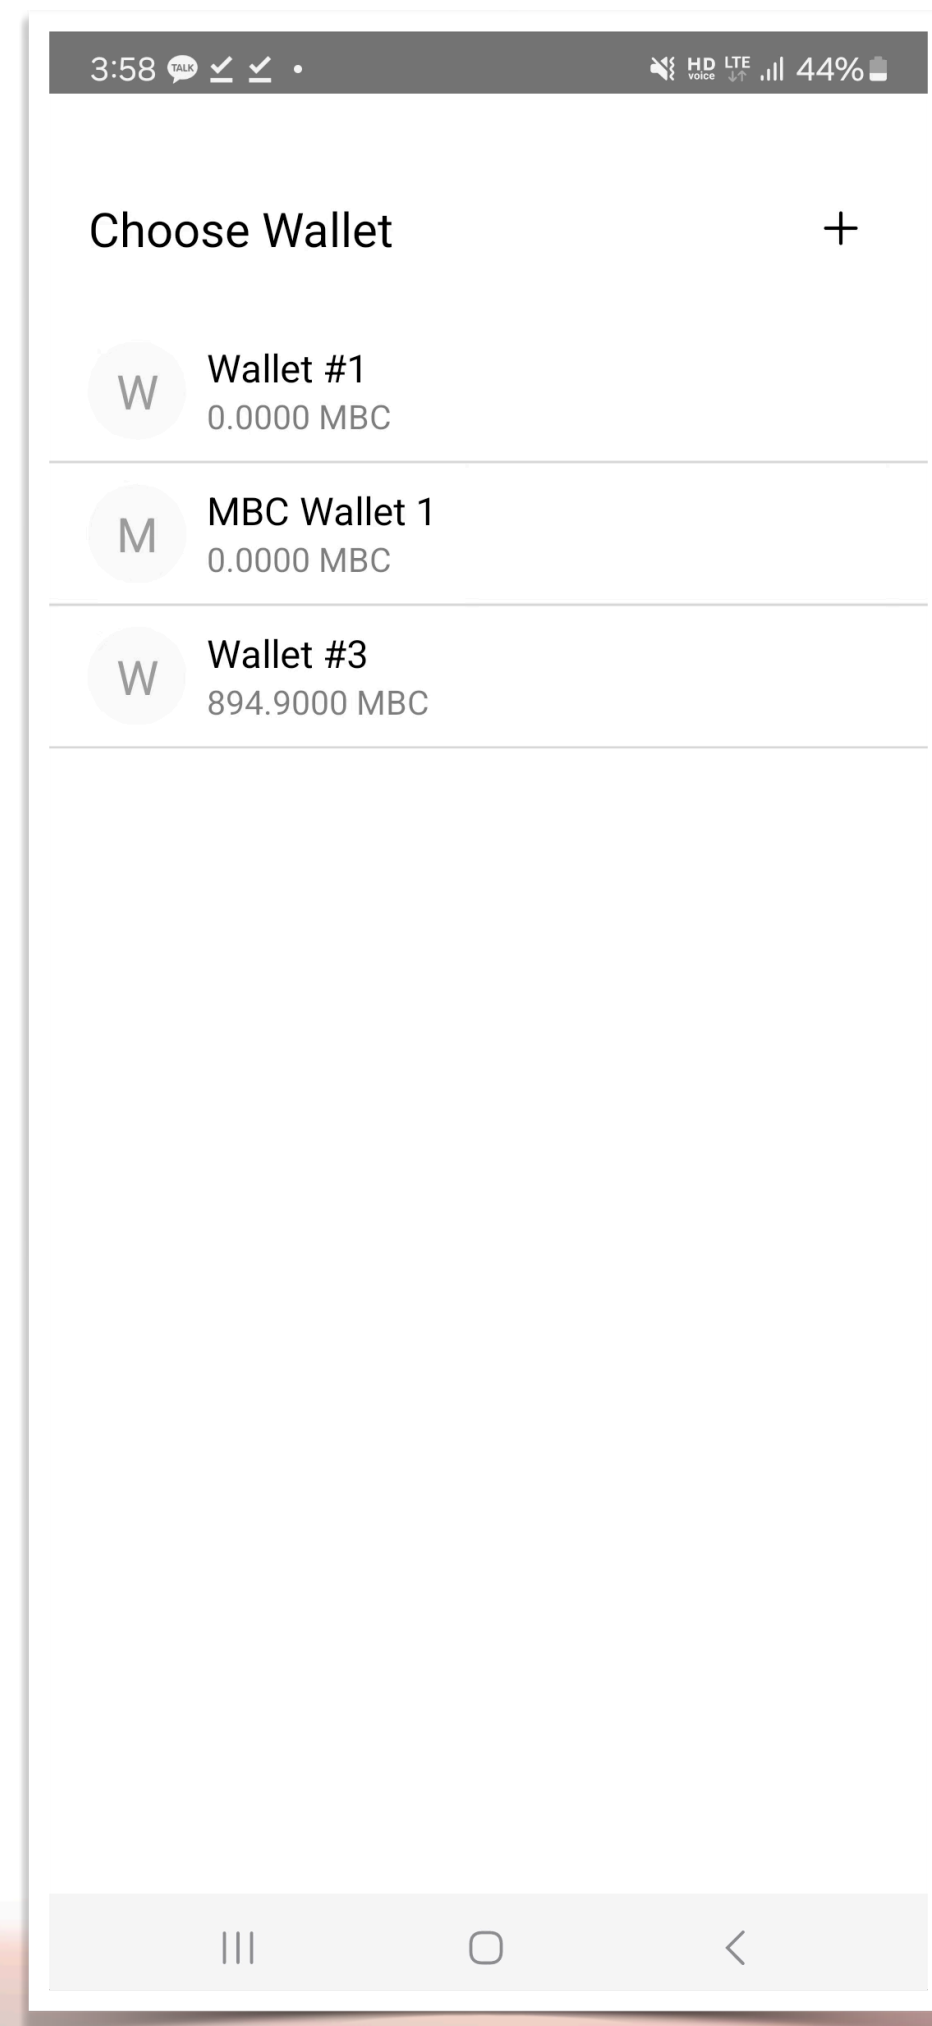

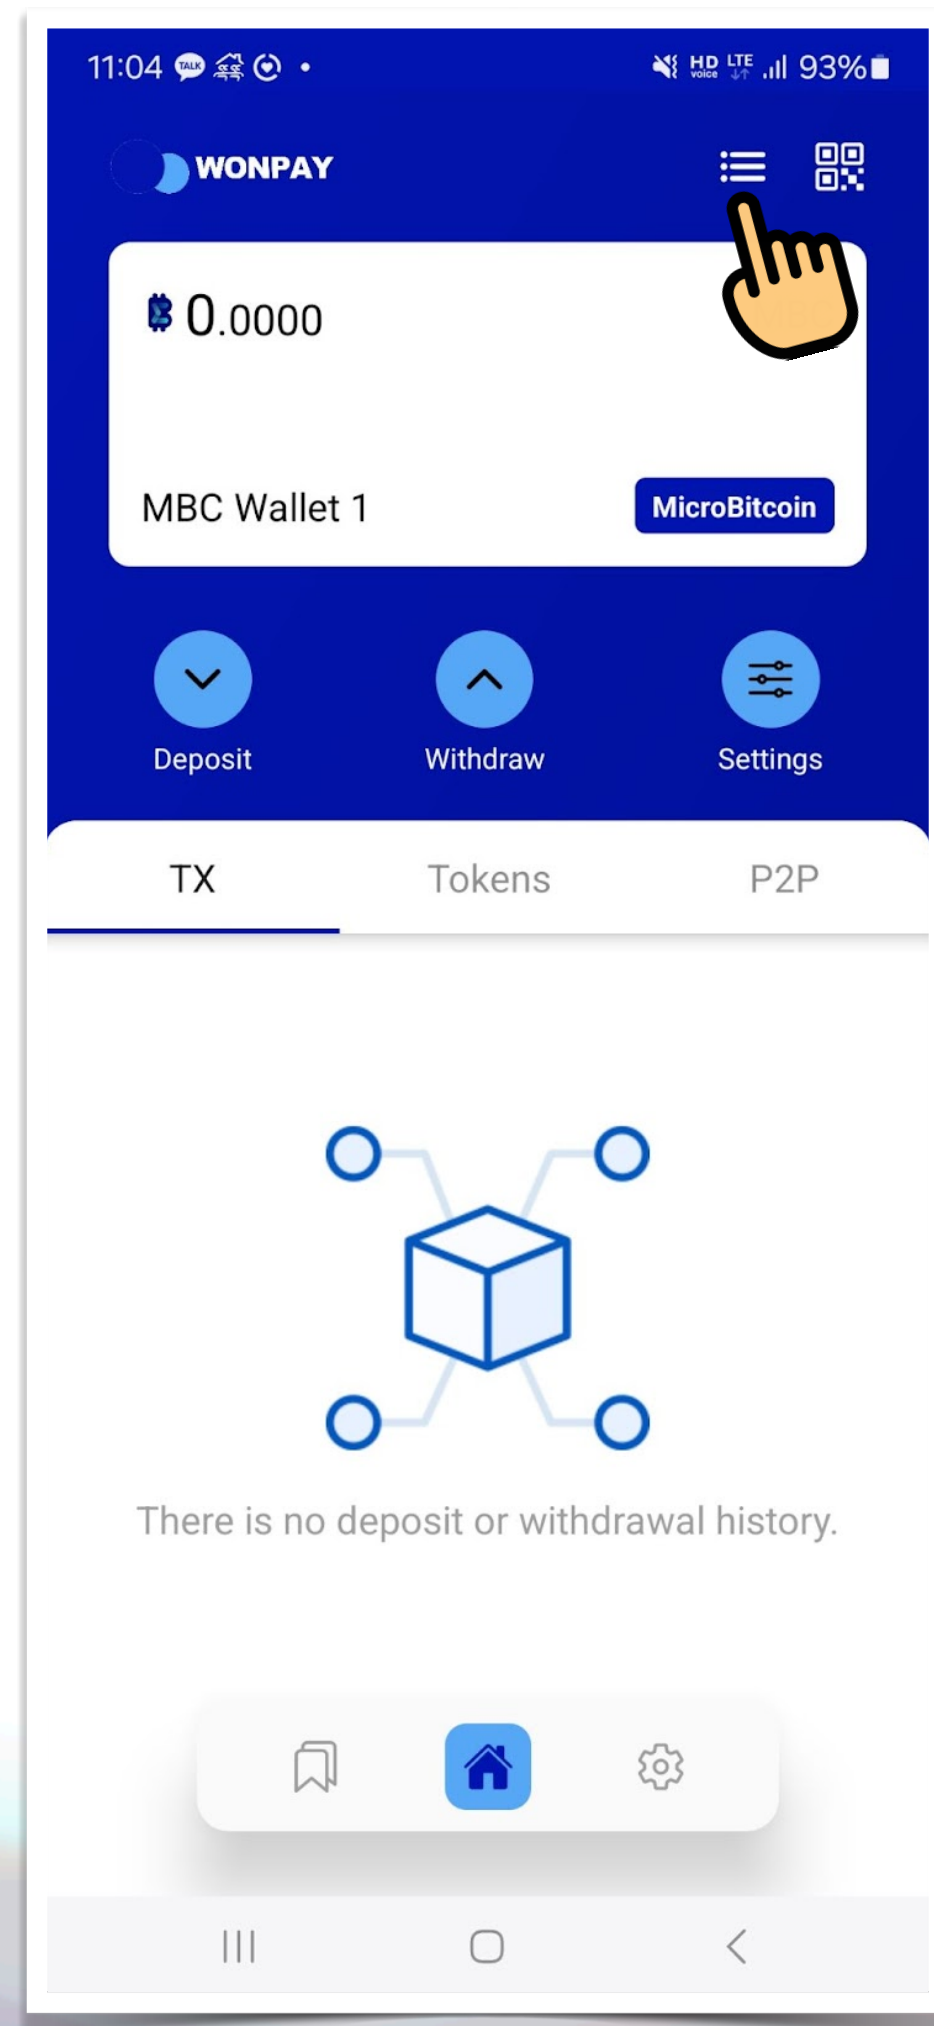

After you agree to the terms and conditions, you'll be presented with a screen to confirm the secret phrase for your created wallet.

This screen supports clipboard copying so that you can copy the passphrase, and will also ask you to confirm that you have kept the passphrase.

If you fail to select the correct sequence of words in the passphrase when confirming, you won't be able to complete the wallet creation, so make sure you keep your passphrase safe before proceeding.

# Check coin/token information

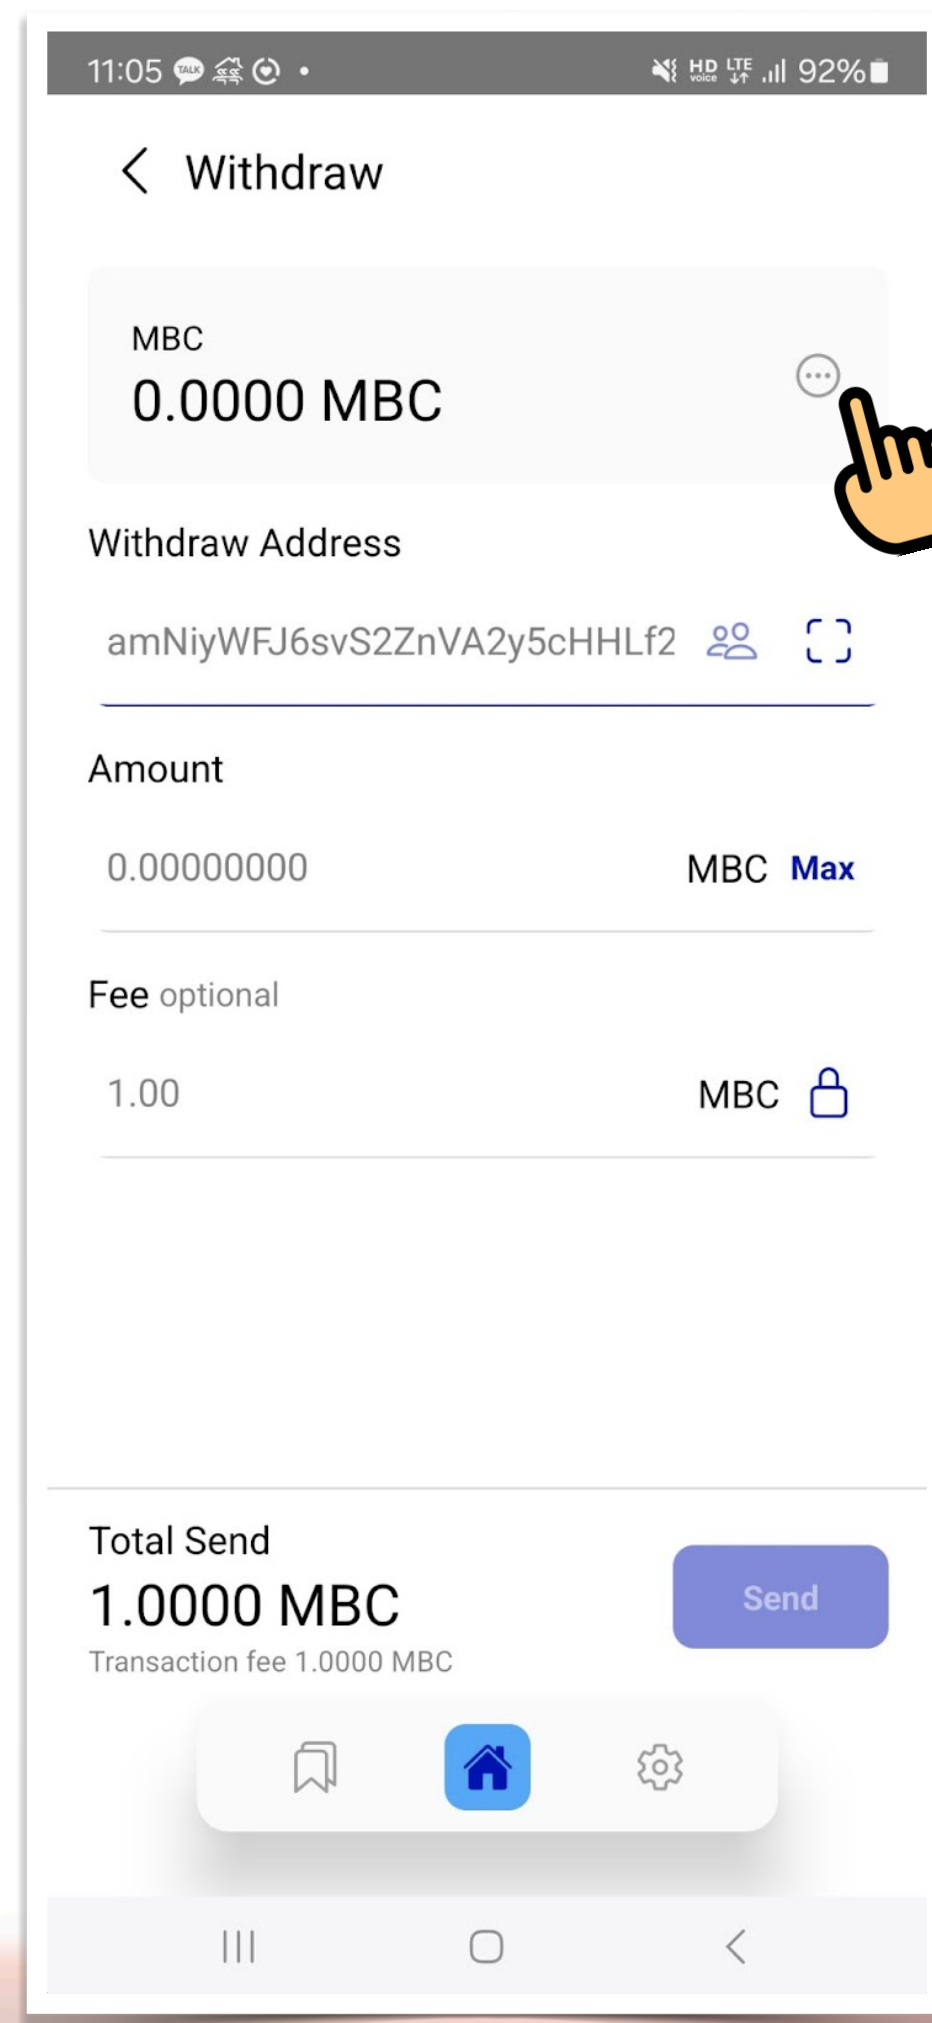

The home screen provides the wallet account address and price information for all your coins/tokens in the top area.

You can create as many wallets as you want by tapping the list at the top(👉), allowing you to cross over different wallet addresses.

In the lower part of the screen, you can see the quantity of coins/tokens you hold, as well as a complete history of transactions made on Wonpay. You can also view your P2P transaction history.(coming soon)

# Send & receive coins/tokens

Receive coins/tokens:

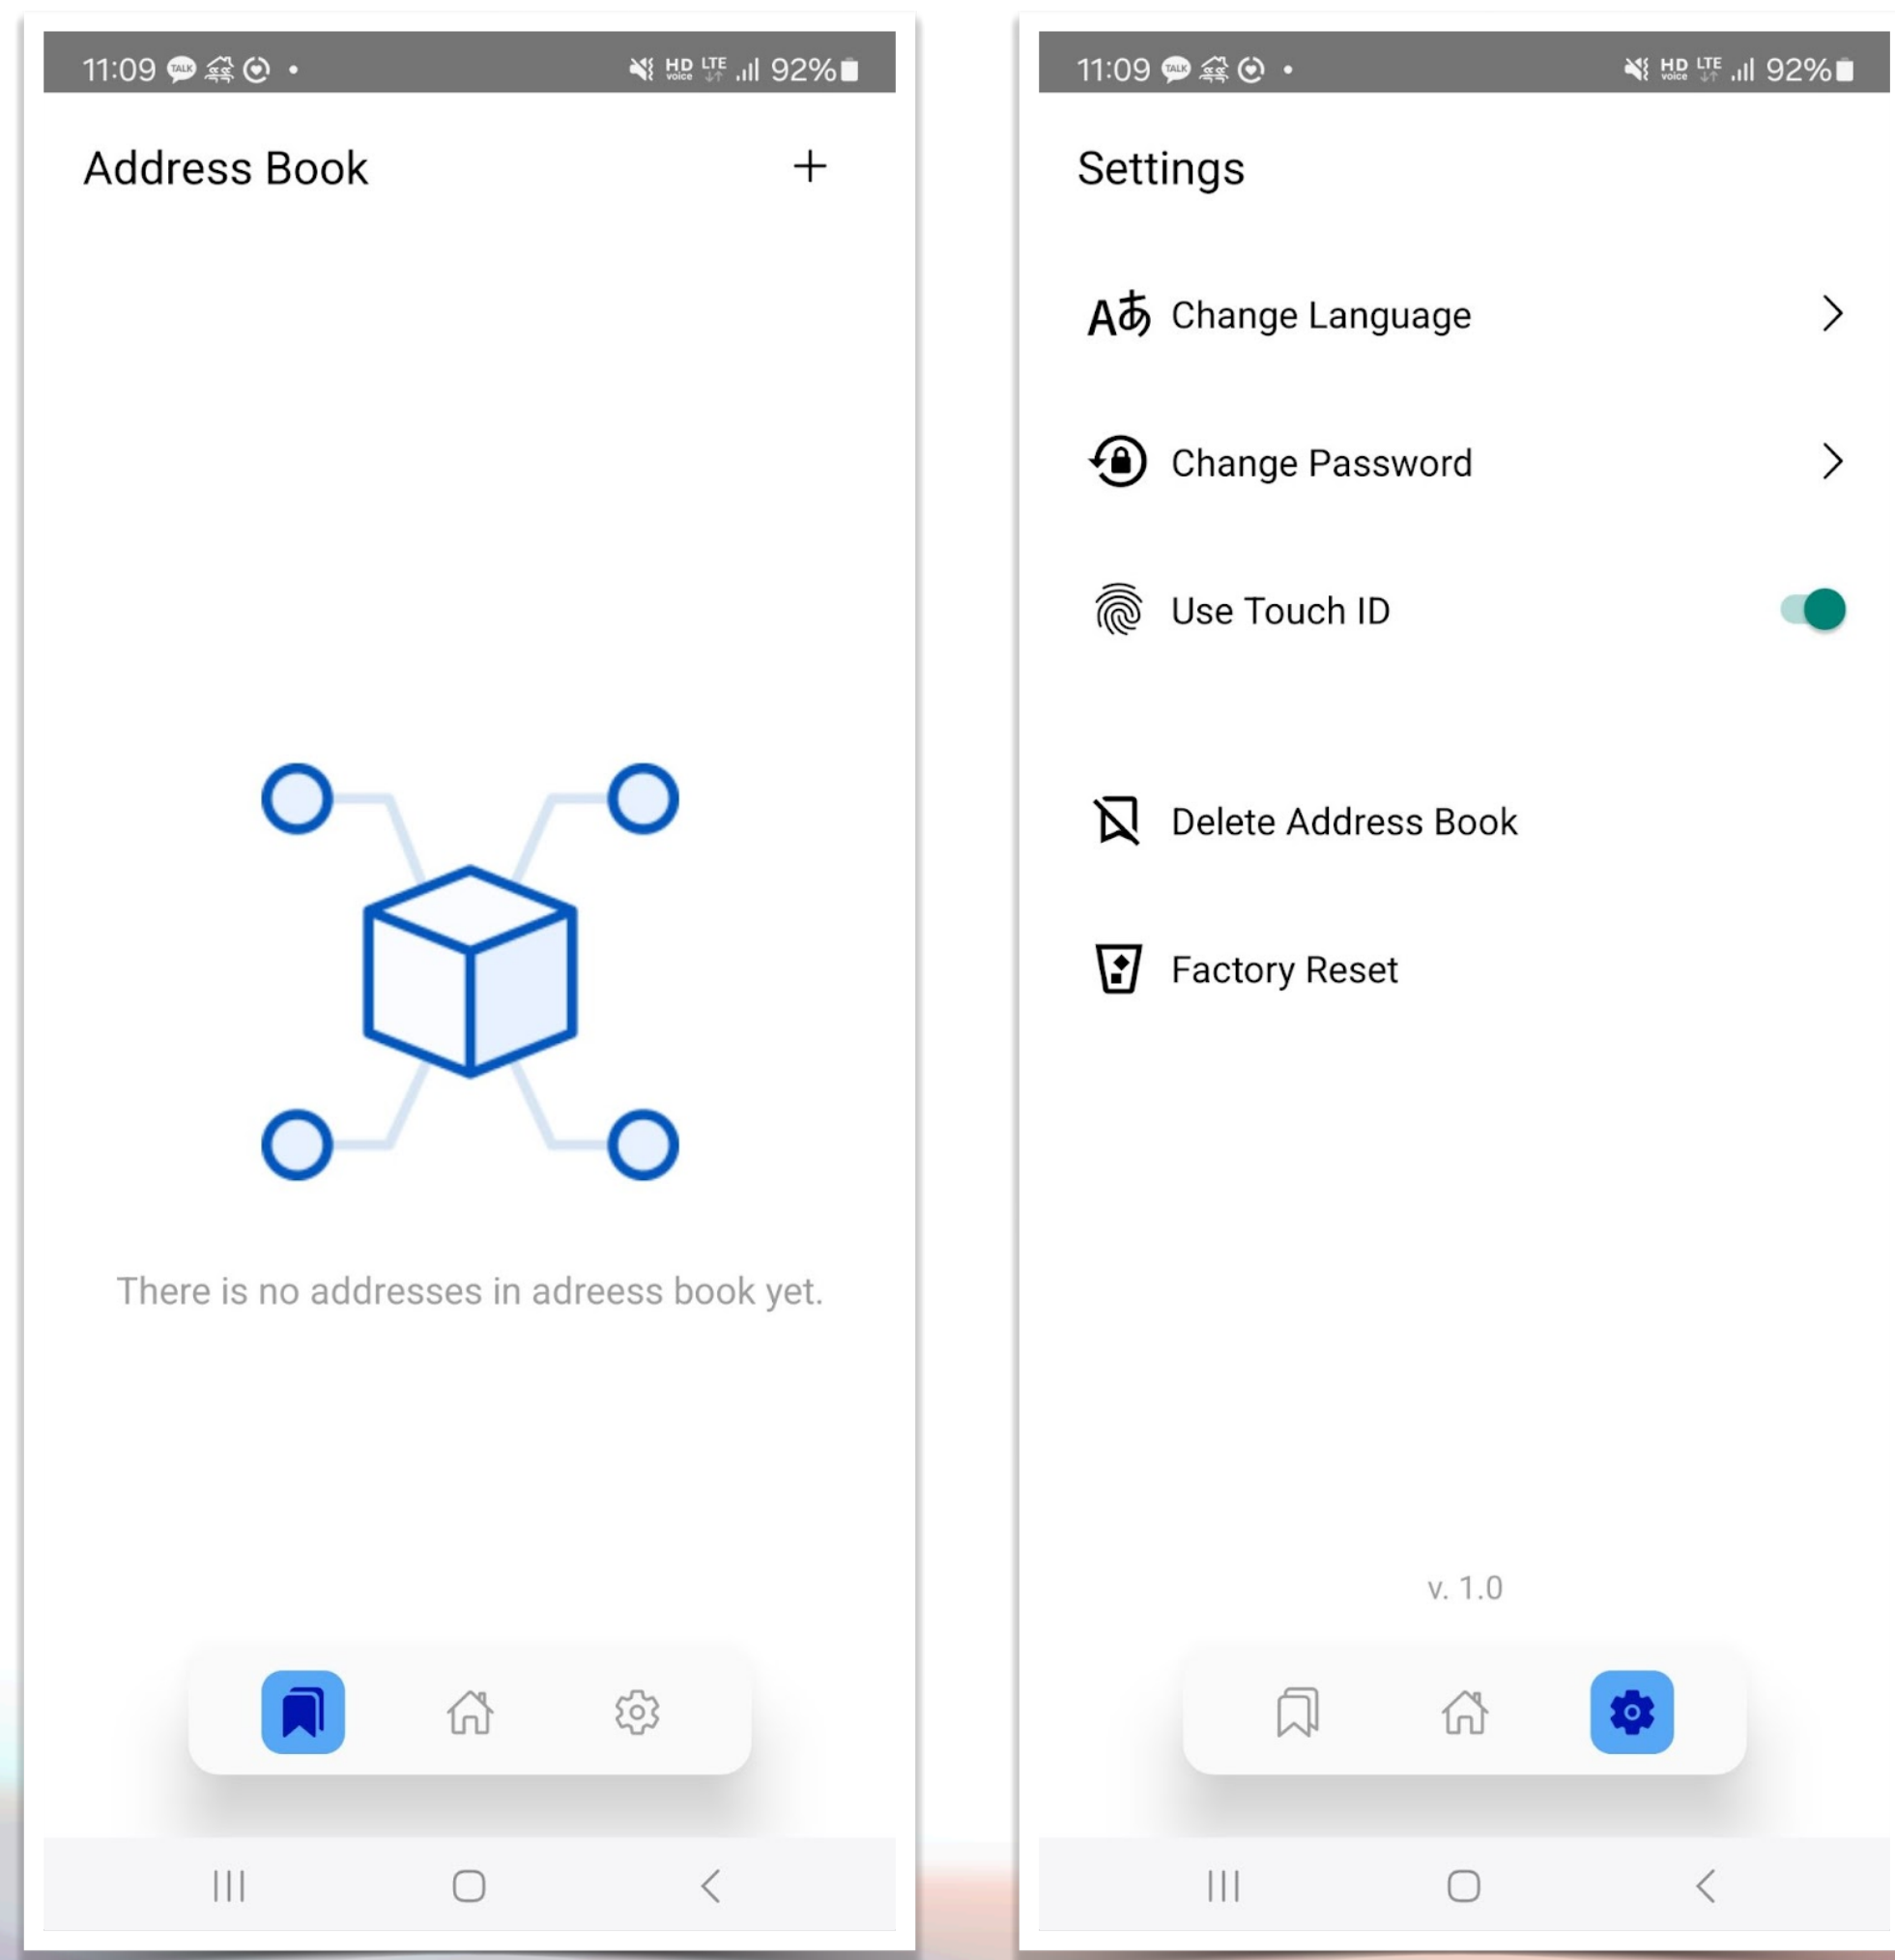

You can easily send coins/tokens with the ability to copy or share a QR code and wallet address.

Send Coins/Tokens:

You can send coins/tokens to the receiving address by using the Send Coins/Tokens function.

Press (👉) to view MBC and your token information, select the coins/tokens you want to send, enter the address and quantity to send, and press the Send button.

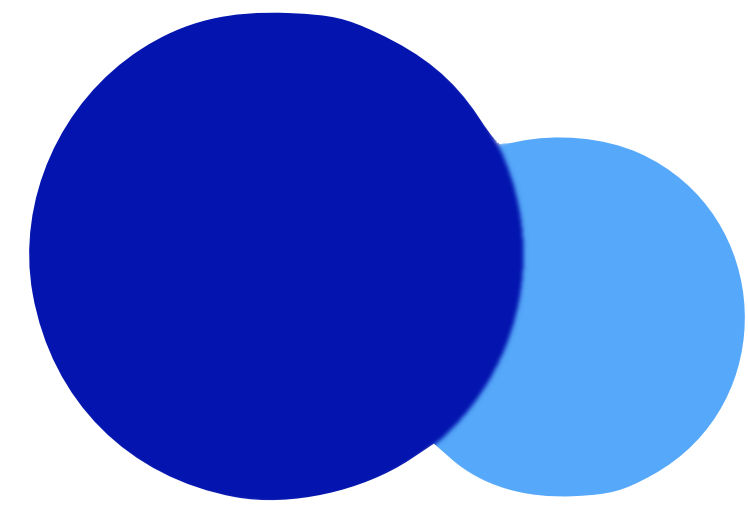

# Managing and Address book

You can register your favorite transaction wallet addresses through your address book to make sending coins/tokens quick and easy.

In the settings screen, you can select the language you want to use and view and modify security settings related to the security of the app.

- **Change language** - You can change to a language you're comfortable with. (English, Korean, Chinese)
- **Security settings** - Set app authentication methods, view passphrases, and private key information.
- **Reset settings** - **(Caution!)** For added security, return your phone to its factory state. Do not factory reset unless you are replacing your phone.
